

LoJack® Stolen Vehicle Recovery System with Early Warning: Keychain Fob Battery Replacement

To ensure optimum system performance and uninterrupted coverage, LoJack recommends changing the keychain fob batteries in your LoJack® Stolen Vehicle Recovery System with Early Warning **every six months**.

Please follow these simple steps to change your keychain fob batteries:

1. Open Keychain Fob

Insert a small coin into the indented slot on the side of the case. Gently pry apart the two halves of the keychain fob. You will notice a circular battery retained by a battery holder.

2. Remove Old Battery

Push the battery out of its holder using a non-metal tool. Properly discard the old battery.

3. Replace Battery

Insert a new battery into the battery holder. The battery **MUST** be installed with the + sign facing up. The red light on the face of the keychain fob should flash several times immediately after properly installing a battery.
